(57) ABSTRACT

In some embodiments, a computer implemented method of processing messages may include providing a dashboard to be displayed to an owner of a brand, the dashboard comprising a message received from a user device, the message comprising an instance of an appearance of a mark or logo of the owner of the brand; receiving a prioritization of the message from the owner of the brand; creating a gallery of messages including the message; and prioritizing the message in the gallery according to the prioritization from the owner of the brand.

PRIORITIZATION OF MESSAGES WITHIN **GALLERY**

CROSS-REFERENCE TO RELATED APPLICATIONS

This application is a continuation of and claims the benefit of priority to U.S. Ser. No. 14/808,283, filed Jul. 24, 2015, which is a continuation of and claims the benefit of priority to U.S. Ser. No. 14/523,728, filed Oct. 24, 2014, which is related to commonly owned U.S. Ser. No. 14/304,855, filed Jun. 13, 2014. This invention is also related to commonly owned U.S. Ser. No. 14/529,064, filed Oct. 30, 2014, each of which is hereby incorporated by reference in its entirety. 15

TECHNICAL FIELD

This invention relates generally to processing electronic messages in a computer network.

BACKGROUND

Mobile devices, such as smartphones, are used to generate messages. The messages may be text messages, photographs 25 (with or without augmenting text) and videos. Users can share such messages with individuals in their social network. However, there is no mechanism for sharing messages with strangers that are participating in a common event.

BRIEF SUMMARY

In some embodiments, a computer implemented method of processing messages may include providing a dashboard to be displayed to an owner of a brand, the dashboard 35 comprising a message received from a user device, the message comprising an instance of an appearance of a mark or logo of the owner of the brand; receiving a prioritization of the message from the owner of the brand; creating a gallery of messages including the message; and prioritizing the message in the gallery according to the prioritization from the owner of the brand.

BRIEF DESCRIPTION OF THE FIGURES

The invention is more fully appreciated in connection with the following detailed description taken in conjunction with the accompanying drawings, in which:

- an embodiment of the invention.
- FIG. 2 illustrates server side processing associated with an embodiment of the invention.
- FIG. 3 illustrates client side processing associated with an embodiment of the invention.
- FIGS. 4-8 illustrate graphical user interfaces that may be associated with embodiments of the invention.
- FIG. 9 illustrates server side processing associated with an alternate embodiment of the invention.

Like reference numerals refer to corresponding parts 60 throughout the several views of the drawings.

DETAILED DESCRIPTION

FIG. 1 illustrates a system 100 configured in accordance 65 with an embodiment of the invention. The system 100 includes a set of client devices 102_1 through 102_N and at

2

least one server 104 connected via network 106. The network 106 may be any combination of wired or wireless

Each client device 102 has standard components, such as a central processing unit 110 and input/output devices 112 connected via a network 114. The input/output devices 112 may include a touch display, dedicated control buttons, physical connectors, speakers and the like. A network interface circuit 116 is also connected to the bus 114 and provides connectivity to network 106. A memory 120 is also connected to the bus 114. The memory 120 stores a communication application 122. The communication application 122 includes instructions executed by CPU 110 to coordinate communications with server 104 and/or other client devices. The client device may be in the form of a tablet, smartphone, wearable technology, laptop computer or desktop computer.

The server 104 also includes standard components, such as a central processing unit 130, a bus 132, input/output devices 134 and a network interface circuit 136. A memory 20 140 is connected to the bus 132. The memory 140 stores a communication module 142. The communication module 142 includes instructions executed by the CPU 130 to coordinate communications with client devices 102. The memory 140 also stores an event gallery module 144. The event gallery module 144 includes instructions executed by the CPU 130 to store messages from participants in a live event. The messages limn an event gallery, which may be supplied to a client device 102 in response to a request from a client device 102.

FIG. 2 illustrates operations associated with an embodiment of the event gallery module 144. The top of the figure illustrates a set of message senders, i.e., Sender_1 through Sender_N. Each message sender is associated with a client device 102. The communication application 122 is configured to accompany a message with geo-location information. Typically, the geo-location information will be collected from a GPS chip resident in the client device. However, other geo-location information may also be used, such as cellular network geo-location information, selfreported geo-location information and the like.

The event gallery module 144 includes an administrative interface that allows one to define an event. For example, the administrative interface may prompt an event planner for event name, event description, event date, event time and 45 event location. The event location is specified in physical coordinates (e.g., GPS coordinates) that define a geo-location fence associated with the event.

As previously indicated, messages from senders include geo-location information. The server 104 receives such FIG. 1 illustrates a system configured in accordance with 50 messages and geo-location data 200 from any number of senders. For each message, the geo-location data is compared to the geo-location fence. If the message was not sent from within the geo-location fence it is not from a permitted position and it is therefore discarded (202-No). If the message is from a permitted position (202—Yes), the message is posted to an event gallery 204.

> The event gallery module 144 may include a curation interface that allows an event planner to optionally curate the event gallery 206. For example, the curation interface may allow the event planner to delete inappropriate or redundant messages. The final operation of FIG. 2 is to supply the event gallery in response to requests 208 from any number of users.

> FIG. 3 illustrates processing associated with the communication application 122 resident on a client device 102. The communication application 122 sends a registration request 300. The registration request may be an explicit request to

join or follow an event. Alternately, the registration request may be triggered by sending geo-location data to server 104. The event gallery module 144 determines whether the geo-location data corresponds to a geo-location fence associated with an event. Event gallery prompt information is 5 received 302 in response to a request. The event gallery prompt information may be indicia of the event, such as a brand, a textual description and the like. The event gallery prompt may be accompanied by a message welcoming the user to the event. The message may have additional infor- 10 mation and instructions regarding the event. The event gallery prompt information is added to a selectable destination list 304. The selectable destination list 304 includes individuals in a user's social network. In this case, the selectable destination list is augmented with indicia of an 15

If a user generates a message (306—Yes) the destination list is supplied 308. The destination list includes individuals in a user's social network and indicia of the event and/or event gallery. If the event gallery is selected (310), the user 20 is added as a follower of the event 312. So, for example, in the case where the user received the event gallery prompt in response to simply communicating goo-location data, the user may formally follow the event by posting a message (shared story) to the event gallery. That is, the event gallery 25 module 144 adds the user to a list of event followers in response to the user posting a message to the event gallery. Finally, messages are sent to recipients designated on the selectable destination list 314. These recipients are typically individuals in the user's social network.

FIG. 4 is an example of a message taken at an event. In this example, the message is a photograph, which may be augmented with text. FIG. 5 illustrates a selectable destination list 500. The selectable destination list 500 includes an entry for a live event 502 and entries 504 for individuals in 35 a social network. Selecting the live event 502 from the selectable destination list 500 may result in a prompt as shown in FIG. 6. The prompt may explain terms associated with posting content to the event gallery. FIG. 7 illustrates an interface listing friends in a social network and one or 40 more events that are being followed.

FIG. 8 is an example of an event gallery 800. The event gallery 800 includes individual posted messages 802. The messages may be photographs, videos or text messages. The event gallery may be available for a specified transitory 45 period. For example, the specified transitory period may be the duration of an event. Indicia of the event gallery may appear in a list of friends (e.g., destination list) for the duration of the event. In one embodiment, the event gallery has individual ephemeral messages shown in a sequence. 50 For example, a first image is shown for five seconds, and then a second image is shown for three seconds, etc.

An event gallery may be open to all event participants. Alternately, an event gallery may be formed for a subset of participants selected from a destination list or some other list 55 (e.g., a list of co-workers at an event). An embodiment of the invention maintains an ongoing event gallery (shared story) for a geo-location. For example, the shared story may extend over months. Alternately, the shared story may be renewed

FIG. 9 illustrates processing operations associated with an alternate embodiment of the invention. The first processing operation of this embodiment is to receive messages for an event gallery 900 from one or more users, intended for distribution to recipients as described above. For example, 65 users may transmit messages via any number of web or mobile channels to communication module 142. Once again,

the messages may be text messages, photographs (with or without augmenting text or graphics) and videos (with or without augmenting text or graphics). For example, events could include concerts, music festivals, awards ceremonies, live sporting events, etc. Similarly, examples of geo-locations contemplated include university campuses, schools, office space of a corporation, private residences, parks, etc. The messages may or may not be associated with a specific event or geo-location. As described above, the event gallery is a listing or sequence of messages available to a set of users. The set of users may be a group designated by a user or event sponsor, etc. In other embodiments, the set of users may be an entire social network, users located within a geolocation, members of a club or organization, etc.

While many messages received from users may be assigned to a position within the event gallery based on order of receipt or randomly, other messages (e.g., advertisements or sponsored messages) may be assigned a priority 904 based on other criteria, as described below. These messages may then be presented in the event gallery in accordance with their assigned priorities 906.

Priority may be based upon sponsored content. Thus, sponsors or advertisers may be able to insert messages within an event gallery for display to users registered with a particular event gallery. For example, a particular brand or product may pay for inclusion (or favorable presentation) of a message within the event gallery. The favorable presentation may stem from a weight assigned to the message, where the weight is a function of the amount of consideration supplied by the sponsor. For example, an advertisement may require the payment of a certain minimum before being included in a given event gallery. Longer or earlier placements (with the event gallery) may command higher minimums. Sponsored content may be displayed on a flat fee or cost per view basis. In addition, video or augmented advertisements (with text, graphics, GIFs, animation, etc.) may similarly command premiums. Other factors considered in the weight of a message may include similarity in theme between the advertisement and the event. For example, toy advertisements may receive greater weight at a children's concert than would alcohol ads. Thus, in some embodiments, unsponsored messages may have no weight and may simply be organized on a temporal or other basis.

As discussed above, the favorable presentation may be in the form of a message placed early in a sequence of messages. Alternately, the favorable presentation may be in the form of a message of a relatively long duration in a sequence of ephemeral messages. In yet other embodiments, there may be circumstances when a message is not presented (e.g., failure to meet minimum bid, excess ad inventory, etc.).

A received message may also be assigned priority based upon endorsed content. For example, a user may endorse a particular brand or product. In such a case, an event gallery controlled by that user may favorably present a message with the brand or product within the event gallery. Weighting and presentation techniques discussed in connection with sponsored content may also be used for endorsed content.

Priority may be assigned based upon any number of every twenty-four hour period at a specified geo-location. 60 evaluations of content. For example, the content of a message may be evaluated for indicia of sponsored content. The indicia may be in form of an observed brand or product in the content. The evaluation may be performed by optical character recognition, machine vision and similar tech-

> Another approach to evaluating the content is to evaluate the sender of the message. For example, if the sender of the

5

message is a sponsor or an endorser, then a priority parameter is assigned in accordance with a favorable weight ascribed to the sponsoring sender or the endorsing sender. Other factors that may be considered in determining the priority parameter may include senders that are celebrities, 5 well-known individuals, or "influencers" (e.g., individuals with admired within a community).

The final processing operation of FIG. 9 is to supply the event gallery in response to a request 908. For example, a client device 102 may access server 104. The event gallery module 144 may include executable code to maintain the event gallery. The event gallery may be served from the server 104 to any number of users associated with client devices 102.

Referring back to FIG. 1, in some embodiments, memory 15 140 of server 104 may be configured to include an advertisement module 148 and a priority module 150. Advertisement module 148 includes instructions executable by CPU 130 to receive messages or advertisements from advertisers, and otherwise administer and implement the advertisement or sponsored messages features of certain embodiments. In some embodiments, advertisers access (or send) messages to advertisement module 148 through a channel distinct from other channels utilized by non-advertiser users. For example, advertisers may access advertisement module 148 through a webpage via a web browser or through a mobile application feature accessible for advertisement submission purposes.

Priority module **150** includes instructions executable by CPU **130** to receive weights and weighting information 30 submitted by users (i.e., advertisers) and to determine priorities of messages. In some embodiments, priority module **150** may also be configured to insert advertisements into the 'stream' of other messages within an event gallery. In addition to these operations, priority module **150** may also 35 be configured in a manner to receive bid amounts from advertisers associated with advertisement message submissions. Thus, in these embodiments, priority module **150** may compare bid amounts (as well as other priority information, if any) to determine the priority according to which an 40 advertisement message may be displayed within an event gallery

The advertising module **148** may include a scanning module to scan the content of messages the a specific brand. For example, in the case of a text based message (e.g., a 45 word or text mark in the message), the scan may be in the form of a word recognition or matching process. Any recognized words, phrases or text may be compared against trademark databases for matches. In the case of a photograph or video, an optical character recognition module may be 50 used to identify logos, symbols, or patterns associated with a brand (e.g., the Nike® Swoosh, etc.).

Upon recognition of a brand, a message may be sent by communication module **142** to a brand owner offering the brand owner an opportunity to prioritize the message in the 55 event gallery. Thus, a brand owner may be afforded an opportunity to pay to have a message displaying their brand inserted into an event gallery and/or for favorable placement in event gallery.

In this regard, a copy of the image may be transmitted to 60 the brand owner allowing the owner an opportunity to review a message before deciding to prioritize the message. In other embodiments, a brand owner may be given an opportunity to edit the message. For instance, a brand owner may choose to add graphics, animations, etc. The brand 65 owner may also be afforded an opportunity to remove references to competing brands.

6

Alternately, an online dashboard of messages may be made available to a brand owner. The dashboard may contain each or several of the instances of the appearance of the brand owner's marks or logos. The owner is able to compare, side-by-side, each message before deciding which messages to prioritize.

In some embodiments, multiple brand messages may be inserted into a single event gallery. In these examples, the various brand owners may be allowed to bid for favorable placement of their messages within the event gallery. Specifically, a highest bidder's message may be placed near the beginning of the event gallery. Conversely, lower bidders may have their messages inserted only if there is sufficient message inventory. Alternately, the duration of an ephemeral message may be based upon bid criteria.

The entire event may be sponsored by the brand owner. In this case, a 'welcome' or 'sponsored by' message may be presented at the beginning of the event gallery, followed by several other messages containing a particular brand or message throughout the gallery. Alternately, a third-party may sponsor the event and allow many brand owners to bid for favorable placement of messages.

The event gallery may have a title that indicates sponsored or endorsed content. The event gallery may be constructed from messages from a single user. In such a case, the event gallery is available to friends of the single user.

The event gallery may be constructed from messages from a pre-selected group of users (such as a group of friends). The event gallery is available to the pre-selected group of users. The event gallery may be constructed by a sponsor with the event gallery available to all individuals in a social network. In this context, a social network is a computer implemented application that facilitates computer network communications between individuals, where the computer network communications may be posts, comments, messages, images and the like.

The event gallery may be constructed from messages from users within a geo-location fence associated with an event. Alternately, the event gallery may be available to individuals following an event.

An embodiment of the present invention relates to a computer storage product with a non-transitory computer readable storage medium having computer code thereon for performing various computer-implemented operations. The media and computer code may be those specially designed and constructed for the purposes of the present invention, or they may be of the kind well known and available to those having skill in the computer software arts. Examples of computer-readable media include, but are not limited to: magnetic media, optical media, magneto-optical media and hardware devices that are specially configured to store and execute program code, such as application-specific integrated circuits ("ASICs"), programmable logic devices ("PLDs") and ROM and RAM devices. Examples of computer code include machine code, such as produced by a compiler, and files containing higher-level code that are executed by a computer using an interpreter. For example, an embodiment of the invention may be implemented using JAVA®, C++, or other object-oriented programming language and development tools. Another embodiment of the invention may be implemented in hardwired circuitry in place of, or in combination with, machine-executable software instructions.

The foregoing description, for purposes of explanation, used specific nomenclature to provide a thorough understanding of the invention. However, it will be apparent to one skilled in the art that specific details are not required in

7

order to practice the invention. Thus, the foregoing descriptions of specific embodiments of the invention are presented for purposes of illustration and description. They are not intended to be exhaustive or to limit the invention to the precise forms disclosed; obviously, many modifications and 5 variations are possible in view of the above teachings. The embodiments were chosen and described in order to best explain the principles of the invention and its practical applications, they thereby enable others skilled in the art to best utilize the invention and various embodiments with 10 various modifications as are suited to the particular use contemplated. It is intended that the following claims and their equivalents define the scope of the invention.

The invention claimed is:

1. A method of processing messages, the method comprising:

providing, by a server computer, a dashboard to be displayed to an owner of a brand, the dashboard comprising a message received from a user device, the message comprising an instance of an appearance of a mark or logo of the owner of the brand;

receiving, at the server computer, a prioritization of the at message from the owner of the brand;

creating, by the server computer, a gallery of messages $_{25}$ including the message; and

prioritizing, by the server computer, the message in the gallery according to the prioritization from the owner of the brand.

- 2. The method of claim 1, wherein the gallery of messages comprises messages received from a plurality of user devices. 30
- **3**. The method of claim **1**, wherein the dashboard allows the owner of the brand to compare a plurality of messages side-by-side to determine which of the plurality of messages to prioritize.
 - 4. The method of claim 1, further comprising:

receiving, at the server computer, an edited version of the message from the owner of the brand; and

wherein the gallery of messages includes the edited version of the message and the edited version of the message is prioritized in the gallery according to the prioritization from the owner of the brand.

- 5. The method of claim 4, wherein the edited version comprises added graphics or animations.
- **6**. The method of claim **4**, wherein the edited version has references to competing brands removed.
 - 7. The method of claim 1, further comprising:

supplying the gallery to a user device for display to a user of the user device.

8. The method of claim **1**, wherein the dashboard comprises a second message received from a user device, the second message comprising an instance of an appearance of a mark or logo of the owner of the brand, the method further comprising:

receiving, at the server computer, a prioritization of the second message from the owner of the brand; and

- prioritizing, by the server computer, the second message in the gallery according to the prioritization of the second message from the owner of the brand.
- **9**. The method of claim **1**, wherein the gallery is associated with an event.
- 10. The method of claim 1, wherein the prioritization comprises prioritizing a placement of the message within the gallery.

8

- 11. The method of claim 1, wherein the message includes at least one of a photograph or video.
 - **12.** A server to process messages, the server comprising: a processor; and
 - a memory storing instructions that, when executed by the processor, cause the server to perform operations comprising:

providing a dashboard to be displayed to an owner of a brand, the dashboard comprising a message received from a user device, the message comprising an instance of an appearance of a mark or logo of the owner of the brand;

receiving a prioritization of the message from the owner of the brand;

creating a gallery of messages including the message;

prioritizing the message in the gallery according to the prioritization from the owner of the brand.

- 13. The server of claim 12, wherein the gallery of messages comprises messages received from a plurality of user devices.
 - 14. The server of claim 12, wherein the dashboard allows the owner of the brand to compare a plurality of messages side-by-side to determine which messages to prioritize.
 - 15. The server of claim 12, the operations further comprising:

receiving an edited version of the message from the owner of the brand; and

wherein the gallery of messages includes the edited version of the message and the edited version of the message is prioritized in the gallery according to the prioritization from the owner of the brand.

- **16**. The server of claim **15**, wherein the edited version comprises added graphics or animations.
- 17. The server of claim 15, wherein the edited version has references to competing brands removed.
- **18**. The server of claim **12**, the operations further comprising:

supplying the gallery to a user device for display to a user of the user device.

- 19. The server of claim 12, wherein the dashboard comprises a second message received from a user device, the second message comprising an instance of an appearance of a mark or logo of the owner of the brand, the operations further comprising:
- receiving a prioritization of the second message from the owner of the brand; and
 - prioritizing the second message in the gallery according to the prioritization of the second message from the owner of the brand.
- **20**. A non-transitory computer readable storage medium comprising instructions that are executable by at least one processor to cause a computing device to perform operations comprising:

providing a dashboard to be displayed to an owner of a brand, the dashboard comprising a message received from a user device, the message comprising an instance of an appearance of a mark or logo of the owner of the brand;

receiving a prioritization of the message from the owner of the brand;

creating a gallery of messages including the message; and prioritizing the message in the gallery according to the prioritization from the owner of the brand.
